SmartStream Budget contains three major application components which include Budget **Management** , Budget Workbench and Budget Analysis. A budget **manager** can employ all of these components, integrated in the SmartStream desktop environment. Most users throughout...

...application. All of the SmartStream Budget application components feature an easy-to-use Microsoft Windows **interface** , with toolbars and consistent online Help and enterprise policies to ensure **control** and consistency. Budget **Management** lets users administer all phases of the budgeting **process** , allowing them to shorten the budgeting cycle, automate budget distribution, perform top-down budgeting, maintain...

...and Forecast) and load data into the system from their current financial systems. The budget **manager** can easily maintain budget data with activities to **adjust** large volumes of budget balances, **manage** multiple budget versions and create rolling budgets. From this pool of enterprise data, the budget **manager** defines which sets of budget **data** will be **distributed** to users throughout the organization. At any point in the budgeting **process** , the budget **manager** can monitor the status of each individual user from a single list. The Budget Workbench provides the tools and environment for detailed, day-to-day budgeting. Individual **managers** can input prepared budget data from the server to the workbench, where they can complete...

...detailed calculations and assumptions to support their budget numbers. Key features include: (1) tools to **adjust** balances by percentages or fixed amounts; (2) spread a total amount across periods; (3) copy...
...to periods in a run-rate mode; (4) update multiple amount classes or periods; (5) **view** variances; (6) add explanatory notes to the budget; and (7) create backup versions for distribution...

...which gives users the information they need to make better planning decisions during the budgeting **process** . For example, users could use decision support to consolidate in-progress budgets, identify sources of...

...for accessing information and creating custom reports from information anywhere in the enterprise; (2) SmartStream **Management** Reporter to create structured financial statements, such as balance sheets or P&Ls, etc.
